

NEXXO Ink for Funai High-Res for Greater Confidence

Our new NEXXO solvent inkjet ink for Funai printing systems makes it possible to print legible, high-resolution alphanumeric expiration dates and lot codes plus **2-D codes on non-porous materials**, including aluminium, tin, PVC, HDPE and other difficult substrates. NEXXO and Funai make CIJs difficult-to-read dot-matrix obsolete.

INK ADVANTAGES

- High-resolution barcodes and type
- Up to 12mm gap throw distance
- Deep blacks for better scannability
- Print on concave and convex shapes
- Print on more non-porous substrates
- A cleaner, more sustainable alternative to CIJ
- Less downtime
- Optimizes high-speed, high-volume production
- Larger drop size

AVAILABILITY

- Continuous supply
- No minimum order
- Single cartridges
- Cartridges for bulk-ink configuration

MORE SUBSTRATE OPTIONS

Ingredients in Kao's aggressive solvent inks, such as MEK, ketones, alcohols and acetates, don't degrade the new thermal inkjet ink cartridges from Funai. This expands the types of substrates that can be printed.

SUPPORTED APPLICATIONS

- Metal, PVC and HDPE pipe
- Cable and wire
- Coated boxes for food and pharmaceutical packaging
- Rigid plastic and glass bottles
- Blister packaging
- Flexible films
- Aluminium or metal cans
