

Design Service for Printing & Embossing

1. Design Development

Design that inspires. We combine creativity with precision. Down to the finest detail.

2. Consulting & Analysis

Before creating the technical data sheet the new design will be analysed for potential problems and optimized.

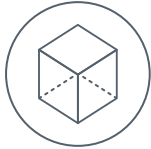

3. Reproduction

The creative implementation of your surface design is made by experienced designers and experts in consideration of all relevant technical details.

Design Service for Printing & Embossing

4. 3D Simulation

In order to offer you a clear picture of the estimated final result, we provide you with a 3D-simulation that depicts even the finest structures.

5. Pilot Line

On our in-house pilot plant we test newly developed designs for various technical properties before manufacturing your production roll.

6. Embossing Rollers & Sleeves

We produce tailor-made embossing rollers and sleeves with the latest laser and etching technologies or with tool engraving. This enables us to precisely reproduce even the smallest structures.

Our consulting offers exclusive quality, saves time and offers tailor-made solutions for individual needs.
