FACT SHEET

DIFFERENTIATE YOUR LABEL BUSINESS

With the Xeikon Panther Series

As a label converter you know that there's no one-size-fits-all solution. As the requirements between the different end-use applications vary there can't be one digital technique that can address all, as with conventional printing. Xeikon's first digital press came to market in 1993. Since then, we have continued to develop a product portfolio which can address most end-use applications in the label market, not just on one printing technology.

Digital production opens new possibilities as you might already know, but differentiation is important to further grow and future-proof your label business. The Xeikon Panther Series are designed to differentiate and tap on new applications currently out of reach for digital production. Which ones?

- ◆ Health & beauty and premium beer markets requiring tactile & glossy printing
- ◆ Industrial labels requiring the combination of variable data and high durability
- ◆ Performance or durable labels that need specific certification like UL or BS5609 standards
- ◆ Household and chemical labels requiring high-opaque white for increased shelf-appeal and readability

Get on board with the Xeikon PX2000 / Xeikon PX3000

Get productive with the Xeikon PX3000 HC

Get creative with the Xeikon PX3000 hybrid solution

Differentiate your label business
